

- Implemented time-series analytics, anomaly detection, price forecasting, and Redis-backed processing to transform raw product data into actionable market intelligence.
- Integrated LLM-powered market analysis to generate natural-language insights from pricing trends while designing modular ingestion, analytics, and API services for scalable data processing.

CERTIFICATIONS

HackerRank Certifications

- **Software Engineer** — HackerRank Certified
- **Problem Solving (Intermediate)** — HackerRank Certified
- **SQL (Intermediate)** — HackerRank Certified

ACHIEVEMENTS

Technical Achievements

- Solved **1000+** **Data Structures & Algorithms** problems across LeetCode and GeeksforGeeks, covering Arrays, Trees, Graphs, Dynamic Programming, Greedy, and Advanced Data Structures.
- Built and deployed multiple production-ready full-stack applications integrating AI, authentication, cloud deployment, third-party APIs, and scalable backend architectures.
- Strong understanding of Object-Oriented Programming, Operating Systems, DBMS, Computer Networks, and REST API design through academic coursework and hands-on projects.
- Passionate about building scalable software solutions and continuously learning modern backend technologies, cloud platforms, and Generative AI applications.
